Electronic Voting system

System Management Plan

Estonia is the only country in the world that has managed to achieve full democracy through the introduction of an electronic voting system.

Vision

- Let's create a voting system that will become an impetus for many developing countries to implement this system in their own countries. She does an excellent job of meeting the basic and fundamental criteria of democracy.
- This should be a system that copes not only with the main elections of the country (such as presidential, parliamentary, local governments, but also will serve the concept of integrating the people into the management of the country.

Mission

1. Citizens of the country will be given the opportunity to vote for a candidate for a specific position and also vote for the bill that will be presented by the government/opposition.
2. Establish a strong connection between the government and the voter.
3. Add more responsibility both to the government for the laws it passes, and to its individual citizens for the choice (or ignoring the choice)

Main Roles

Central Election Commission

This role is equivalent to an administrator who accepts or denies requests to post a voting item.

It also has full access to all activities (functionality) in the system.

Public authorities / Legal entities registered in the system

This is a role that is given the opportunity to post its candidates as well as laws to vote.

They also have the opportunity to monitor in real mode the mood of voters regarding a particular initiative.

Elector

A voter who can get acquainted with the initiative, personality and vote based on his views and worldviews.

Project Plan Summary

Click to edit this text

A system will be created that will radically change every person (whether it is a person applying for some position or just a voter, it doesn't matter). By implementing all of the above concepts, we will definitely achieve results.

Project Schedule

Stage 1. Capstone Project Creation and Setup	Stage 2. Capstone Project Use Cases	Stage 3. Capstone Project Database Layer Design	Stage 4. Capstone Project Interface Design	Stage 5. Capstone Project Web App Implementation	Stage 6. Presenting the Final Solution
1st Week	1st Week	2nd Week	2nd Week	3rd Week	3rd Week
